## Guideline for the Organization of Student Activities

Apart from following the advices in the technical guidelines “Advice on the Management of Collective Festive Events, and Recreational and Sports Activities” and “Advice on Class Resumption for Higher Education Institutions” announced by Novel Coronavirus Response and Coordination Centre, the following measures should also be adopted for the organization of student activities:

1. Suspend all exchange activities with non-local unit and personnel.
2. Perform crowd management by limiting the total number of spectators and participants to 100 or less, or less than 50% of the venue capacity, whichever is lower.
3. The maximum number of hours for each on-campus activity is 4 hours (excluding time for preparation and restoration of the venue).
4. If you need to invite outsiders to act as performers, speakers, contestants, etc. for the event, you are recommended to select people who live in Macau and stay in Macau for the entire 14 days before attending the event. No invitation to individuals from the areas with widespread community transmission of COVID-19 or areas with high number of COVID-19<sup>1</sup> (except online activities).
5. The organizer shall record the arrival and departure time of all participants (including performers, staff, spectators and participants, etc.) as far as possible.
6. When there are too many participants, it is recommended to stagger the arrival and departure times to the venue. If conditions allow, entrances and exits should be adjusted according to the actual situation to avoid too many people gathering at the same entrance/ exit at the same time.

In response to the continuous changes in the novel coronavirus pneumonia epidemic, this guideline will be updated in due course according to the latest disease information and epidemic prevention measures provided by the Health Bureau of the Macau Special Administrative Region Government.
