Prevent Novel Coronavirus Pneumonia – Advice on the Management of Individuals with Macao Health Code in Red or Yellow Colour		

The Macao Health Code is an aid for establishments in identifying persons who are infected or suspected to be infected with novel coronavirus pneumonia (COVID-19). With an aim to prevent these people from entering places with crowd gathering, which increases the risk of disease transmission, these guidelines are formulated for establishments to follow.

## I. Individuals with a red code

In the case of a red Macao Health Code, "Entry denied" will be displayed. In general, a red code indicates that the person:

- 1.1 Has been diagnosed with COVID-19; or
- 1.2 Has had close contact with a confirmed case;
- 1.3 Is a suspected case of COVID-19 currently under laboratory investigation; or
- 1.4 Has visited a high-risk area for COVID-19 within the past 14 days.

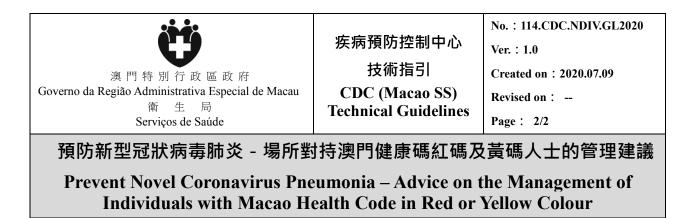

**Management advice:** Individuals with a red code should be denied admission in order to protect other people in the establishment from the risk of infection.

## II. Individuals with a yellow code

In the case of a yellow Macao Health Code, "Please exercise self-health management" will be displayed. In general, a yellow code indicates that the person:

- 2.1 Has declared the presence of a fever; or
- 2.2 Has declared the presence of acute cough, sore throat or shortness of breath; or
- 2.3 Has had casual contact with an infected person (having been in the same space without any close contact as an infected person).

**Management advice:** Individuals with a yellow code should refrain from visiting crowded places unless it is absolutely necessary. In that case, appropriate arrangements should be made by the establishments to reduce contact between the yellow code holder and others as much as possible).

For the notes on self-health management and other anti-COVID-19 guidelines, please refer to the Special Webpage Against Epidemics: https://www.ssm.gov.mo/PreventCOVID-19.
